## Proposed officer's amendments to item FPOL1807-1 WFCC37.18 Contestable Electricity Supply

### Proposed amendment

To add an additional part to point 1, as per the text in green italics below:

1. Accepts the Tender submitted by Synergy for the supply of grid electricity at an estimated total contract price of \$926,754 (ex GST):
  - a. subject to actual electricity consumption in accordance with the terms and conditions specified in the tender document for a 3 year period from 1 July 2018 to 30 June 2021; *and*
  - b. *that the contract includes the flexibility to 'upgrade' to a purchase of 100% renewable energy at any stage during the term of the contract; this being subject to Synergy demonstrating they have an agreement in place to source renewable energy, at an acceptable cost premium, from a local source such as the solar farm proposed by Epuron.*

### Reason for change

The amendment is proposed to ensure the City retains an option to be able to move to the supply of renewable energy should a local source become available at an acceptable cost, during the term of the contract.
